

Say hello to...

{ TalkApp }

# Powered by Markdown !

*Smart and efficient Keynote app from and for developers...*

- **Write**: your slide using plain markdown
- **Preview**: it using the split layout
- **Print**: it using pdf generator
- **Share**: it using the `git` friendly file format...

How ?

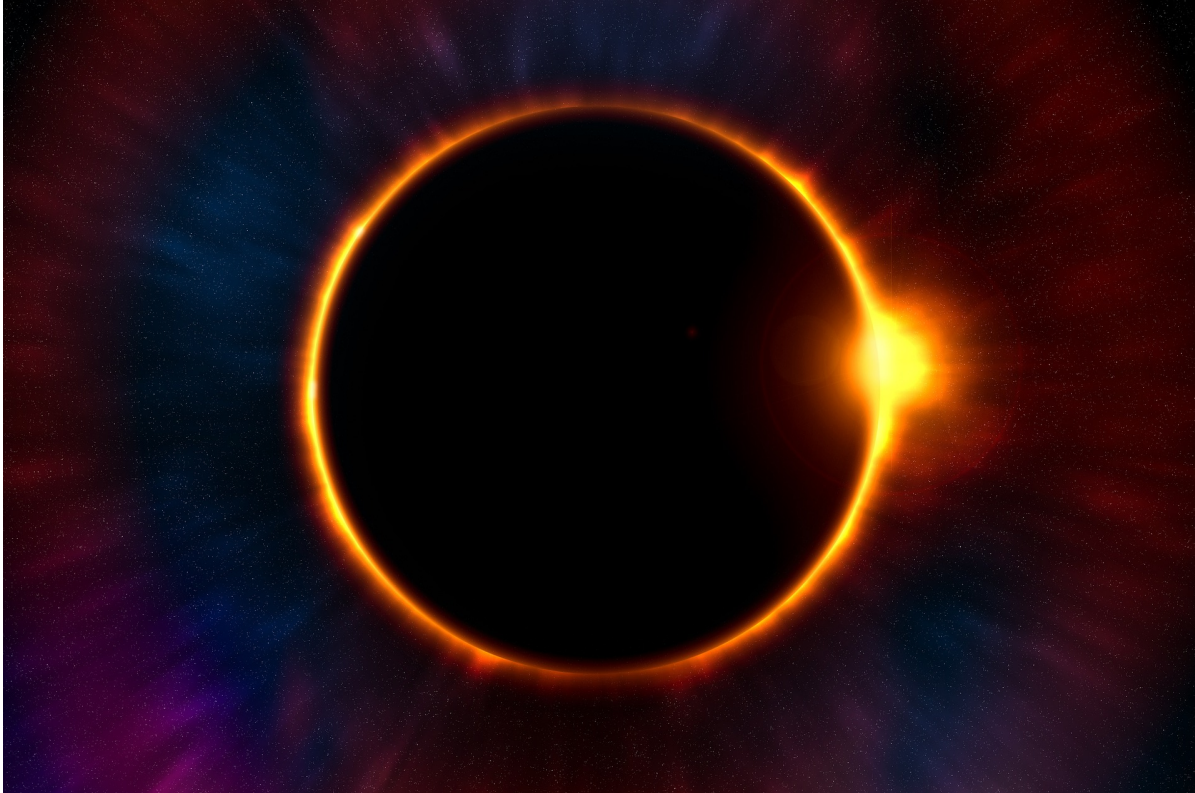

Simply use the HR tag as a slide separator

```
---
```

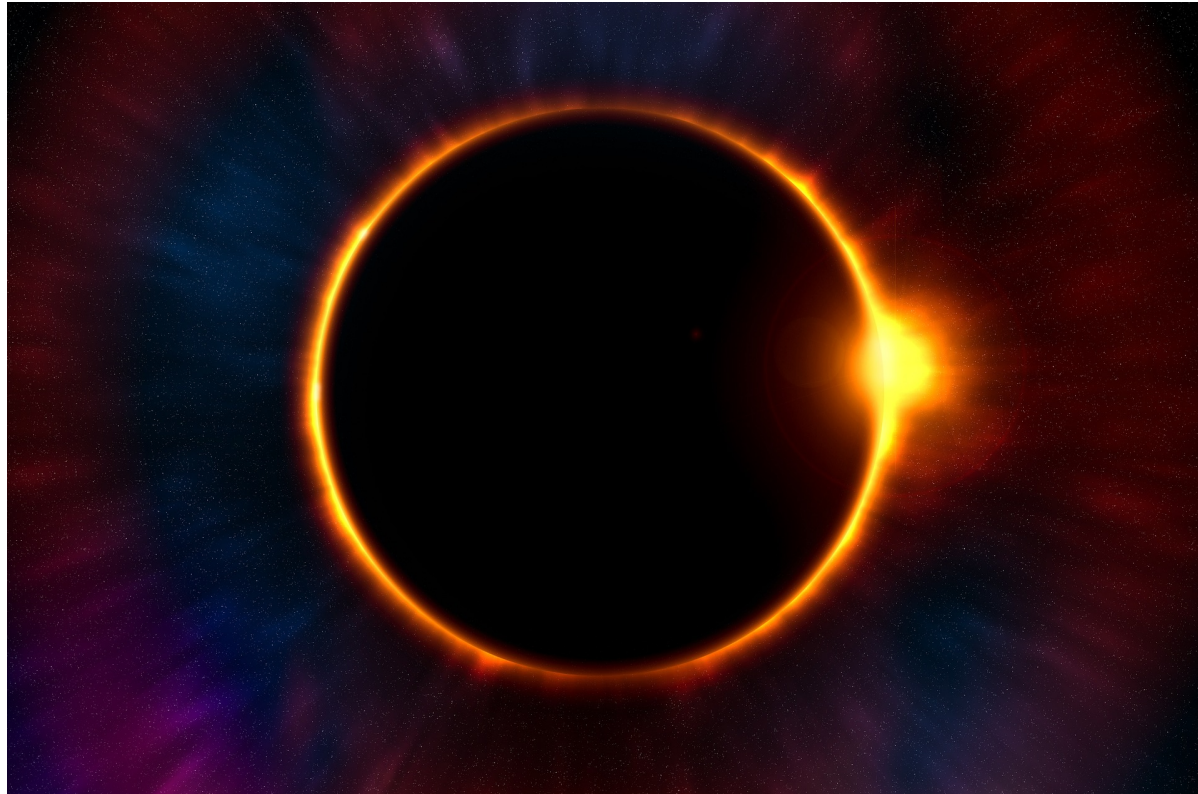

# Powered by Electron !

- Native integration
  - Use your classical menu to
    - Open
    - Save
    - Save As
    - Print As Pdf
  - Use a classic .md format

# Include images

# Include and position images

# Highlight your code

```
class Hello {  
    public static main(String[] args){  
        //write here your convincing code...  
    }  
}
```

This code can also work inlined... `sh run.sh`

And with other language

```
function hello(){  
    //print JS code here...  
}
```

# Use DARK theme

every content will have their color adapted accordingly...

- even **bold** elements
- or *italic* ones...

| *citation as well...*

Wanna see  
more ?

The background of the slide is a dark, textured space with swirling patterns of deep red, purple, and blue. In the center, there is a large, bright orange ring that appears to be glowing. Inside this ring is a solid black circle. The text "Image based cover..." is written in white, sans-serif font across the middle of the black circle.

Image based cover...

# Pimp your style...

This will be an orange **element**

This line will be an orange

This line will be big !!!

*and so on....*

You can also underscore or ~~stroke~~ your text

Then add some **mark**

Use some sub: H<sub>2</sub>O or some sup: 29<sup>th</sup>

Finally, you can also use font-awesome icons  and tune it 

See you :-)
