Say hello to...

{ TalkApp }

Powered by Markdown !

Smart and efficient Keynote app from and for developers...

- **Write**: your slide using plain markdown
- **Preview**: it using the split layout
- **Print**: it using pdf generator
- **Share**: it using the `git`` friendly file format...

## How ?

Simply use the HR tag as a slide separator

```
---
```

Powered by Electron !

- Native integration
    - Use your classical menu to
        - Open
        - Save
        - Save As
        - Print As Pdf
    - Use a classic .md format

Powered by HTML

Highlight your code

```
class Hello {

    public static main(String[] args){

        //write here your convincing code...

    }

}
```

This code can also work inlined... `sh run.sh`

And with other language

```
function hello(){

    //print JS code here...

}
```

Use DARK theme

every content will have their color adapted accordly...

- even **bold** elements
- or *italic* ones...

> *citation as well...*
